

# VELA Tango for people with arthritis

Supports and promotes activity and mobility

THE V-HANDLE IS PLACED CLOSER TO THE SEAT FOR EASY OPERATION

THE ARTHRITIS-SWITCH FOR ELECTRICAL HEIGHT ADJUSTMENT

VELA Tango 100El

VELA Tango El Sit-stand

VELA Tango El is a unique chair for people with arthritis. The chair supports and promotes daily activities e.g. in the kitchen or at the workplace where people with arthritis often have problems due to reduced mobility, poor balance, tiredness or pains.

### BENEFITS:

- :: The electrical height adjustment allows to raise the seat and in combination with the arm rest it ensures, that the user can avoid painful bumps and jolts when getting up and sitting down. Furthermore the height adjustment makes it possible to reach high up, for instant, in a cupboard.
- :: The unique central brake ensures that the chair stands still when the user is getting up, sitting down or performing various activities.
- :: Plenty of room between the smoothly running wheels makes it possible to 'walk' the chair while sitting, and to move around without assistance. This leads to more mobility and self-reliance for the user.
- :: Pain caused by reduced mobility can be relieved with a short and supporting seat supporting free movement of the legs and stability.
- :: The chair can be adapted to the need of the individual user, for instance with another seat or back. VELA Tango can be ordered with different handles and switches to ease the operation of the chair when you have reduced strength, mobility or pain in the hands.
